GV2-M with screw clamp connections

Presentation

Motor circuit breakers GV2-M and GV2-P are 3-pole thermal-magnetic circuit breakers **specifically designed for the control and protection of motors**, conforming to standards IEC 947-2 and IEC 947-4-1.

Type of connection

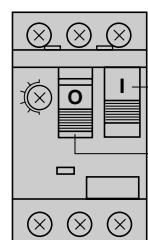

GV2-M and GV2-P motor circuit breakers are designed for connection by screw clamp connectors. Motor circuit breaker GV2-M can be supplied with **spring terminal connections**.

This technique makes it possible to ensure secure and permanent tightness, resistant to harsh environments, vibration and impact, which is even more effective if conductors without cable ends are used. Each connector can take two independent conductors.

Range

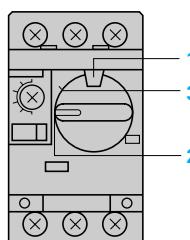

GV2-M with screw clamp connections: 0.1 to 32 A i.e. up to 15 kW at 400 V, breaking capacity 10 to 100 kA.
GV2-M with spring terminal connections: 0.1 to 25 A i.e. up to 11 kW at 400 V, breaking capacity 15 to 100 kA.
GV2-P screw clamp connections: 0.1 to 25 A i.e. up to 11 kW at 400 V, breaking capacity 50 to 100 kA.

Operation

GV2-M

GV2-M: pushbutton control.
Energisation is controlled manually by operating the Start button "I" 1.
De-energisation is controlled manually by operating the Stop button "O" 2, or automatically by the thermal-magnetic protection elements or by a voltage trip attachment

GV2-P

GV2-P: control by rotary knob.
Energisation is controlled manually by turning the knob to position "I" 1.
De-energisation is controlled manually by turning the knob to position "O" 2.
De-energisation due to a fault automatically places the knob in the "Trip" position 3. Re-energisation is possible only after having returned the knob to position "O".

GV2-P

Control is manual and local when the motor circuit breaker is used on its own.
Control is automatic and remote when it is associated with a contactor.

Protection of motors and personnel

Motor protection is provided by the thermal-magnetic protection elements incorporated in the motor circuit breaker. The **magnetic** elements (short circuit protection) have a non-adjustable tripping threshold, which is equal to about 13 times the maximum setting current of the thermal trips. The **thermal** elements (overload protection) include automatic compensation for ambient temperature variations between - 20 °C and + 60 °C for open mounting and between - 20 °C and + 40 °C for enclosed mounting. The rated operational current of the motor is displayed by means of a graduated knob 4.

Personnel protection is also provided. All live parts are protected against direct finger contact.

The addition of an undervoltage trip allows the circuit breaker to be de-energised in the event of an undervoltage condition. The user is therefore protected against sudden starting of the machine when normal voltage is restored, since the Start button "I" has to be pressed to restart the motor.

With the addition of a shunt trip, de-energisation of the unit can be remotely controlled.

The operators on both open-mounted and enclosed motor circuit breakers can be locked in the Stop position "O" by up to 3 padlocks.

Because it is suitable for isolation, the GV2 , in the open position, provides an adequate isolation distance and indicates the actual position of the moving contacts by the position of the operators.

Special features

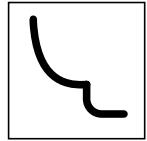

These motor circuit breakers are easily installed in any configuration thanks to their universal fixing arrangement: screw fixing or clip-on mounting on omega, asymmetrical or combination rails.

Thermal-magnetic motor circuit breakers GV2-M with built-in auxiliary contact block

With instantaneous auxiliary contact block (composition, see page 21034/7):

- GV2-AE1, add suffix **AE1TQ** to the motor circuit breaker reference selected above. Example: **GV2-M01AE1TQ**.
 - GV2-AE11, add suffix **AE11TQ** to the motor circuit breaker reference selected above. Example: **GV2-M01AE11TQ**.
 - GV2-AN11, add suffix **AN11TQ** to the motor circuit breaker reference selected above. Example: **GV2-M01AN11TQ**.
- These thermal-magnetic motor circuit breakers with built-in contact block are sold in lots of 20 parts in a single pack.

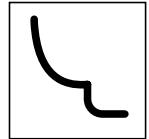

(1) Maximum rating that can be mounted in enclosures shown on page 21020/3.

LA9-LB920

- (1) Mounting of a **GV2-AE** contact block or a **GV2-AK00** visible isolation block on **GV2-P**.
 (2) Choice of N/C or N/O contact operation depending on which way round the reversible block is mounted.
 (3) The **GV2-AD** is always mounted next to the circuit breaker.
 (4) To order an undervoltage trip replace the dot in the reference by the letter **U**, example: **GV2-AU025**.
 To order a shunt trip replace the dot in the reference by the letter **S**, example: **GV2-AS025**.
 (5) 3-pole visible isolation on incoming side of **GV2-P** motor circuit breaker.
